

## NEWS

### HeuToy-mini

Owners of small ponies, donkeys, goats, sheep and other animals would also like to benefit from the advantages that HeuToy can bring. Therefore, there is the HeuToy with a smaller hole diameter for a maximum of 3kg of hay.

### The HeuToy stand

To enable feeding with the HeuToy in the paddock, there are stands in **in two variations**, both of which are completely weatherproof, of course.

The **HTS 5** stand provides firm support for up to 5 HeuToys. The larger **HTS 16** stand has room for up to 16 HeuToys and is made up of four divisions. This is the way to ensure that each horse (regardless of the rank order) has access to the food source.

### The HeuToy car

For quick and easy filling of our HeuToys we have developed the HeuToy HTW4 **HTW 4** and **HTW 8** filling cars. With the HTW8, you can hang up to eight HeuToys within eight seconds. Then drive the filled HeuToys to the individual hanging sites. You only have to hang the HeuToy at the feeding position! That's a huge relief for rational feeding!

## Customers references

... We're still impressed by the original idea and concept of the HeuToy. It is always a pleasure to watch our 15 year old gelding (cribber, dust allergy sufferer) spending his time throwing the HeuToy filled with hay around through the air like an acrobat and then stopping it elegantly with his head (!). Also the pandemonium he creates by swinging the HeuToy around is no longer a disturbance for his fellow stall mates. Great "resilience" for all! It should also be highlighted that the hay dust falls well out of the HeuToy, so we can do away completely with the annoying hay water! ... Best regards Dr. von Langsdorff

Super invention! I borrowed it for my last stall and have now moved. Request for urgent delivery: my Minishetty, who lives with my warmblood as best friend in the box, will go crazy otherwise. Best regards U. Nägele

...since we've been using HeuToys for our jumpers, we have noticed a marked improvement in their movement in the neck area... Yours, Renata Boxler

Dear Mr. Röck, I ordered 5 of your HeuToys about eight weeks ago in order to provide some movement for my horses when they are eating. And I have to say that it has been a total success. All of my horses got over their apprehensions very quickly and got stuck in with gusto... Best regards, Sven Schirmer

Hello Mr Röck, thanks for the quick processing! The HeuToys were put together in no time and hung up with anticipation that same evening. It took them all of five seconds to get used to it! It was enthusiastically plucked at directly by all the horses and thrown about for what it was worth... After a few days they all still look like new even though our herd are quite tempestuous and have already destroyed lots of other things! A really great and useful invention. Best regards Yvonne Trappmann

I can wholeheartedly agree! My horse's neck muscles have become much looser after a relatively short period of time, which is very clear during riding! He takes much longer with his ration of hay, and because I can now weight it beforehand, he has lost weight and is keeping it off! – In short: I am totally satisfied with my/his HeuToy, never knew that this might happen to him, it's just like it is described everywhere and I'd buy it again every time! Greetings, Tanja & Conti

Marshall GmbH Sport Horses & Management in Heiligkreuztal has equipped its complete stall with HeuToys.

Feeding / dust brake & activity

# Eat, play and have fun HeuToy® Feeding / dust brake & activity

We humans have placed ourselves above the animals. This results in an incredibly large responsibility to them! With the HeuToy, we provide your animals with plenty of movement, fun and distractions during their favourite activity - eating!

As upper Swabian manufacturer we had a lot of fun developing the HeuToy. From the outset, it should be a controllable, health-promoting feeding and activity resource for horses and animals. They should receive their hay more slowly and at a deeper, more ideal eating position. Here the animals have to move around because the HeuToy is hung so that it can move. Colic can be avoided with the HeuToy. Horses with a dust allergy also enjoy distinct relief. Our customers report that horses that are fed from the HeuToy can even eat some dry hay again from it.

The horses are concerned with their daily ration of hay for much longer and sometimes only want to eat from the HeuToy. You will quickly see how much fun the animals have in their movement and activity. The HeuToy offers you and your horse stable quality from a material that is both approved for food provision and is anti-splitter.

Our patented protected HeuToy is a real product "Made in Germany".

The HeuToy has characteristics that no other feeding system can offer you. Find out for yourself!

And finally a question: if you are satisfied with your HeuToy, please recommend us further.

Thank you, sincerely your

*Udo Röck*

Udo Röck

## The different kind of thinking and eating fun for your horse!

The ideal activity for horses in the stable, paddock or pasture. Boredom is a thing of the past! Provides hours of variety for your horse.

Horses are intelligent and curious. Out of boredom, they develop task such as weaving and cribbing or other bad habits. Our HeuToy works against this and prevents fast eating. This will prevent colic and other digestive disorders.

## The benefits

**Activity** Your horse is occupied for hours with eating hay through the defined holes and the specially developed design of the HeuToy. This is a welcome change in the day-to-day routine for the horse, encouraging his natural play instinct, relieving stress and promoting additional calm. Activity with the HeuToy counteracts behavioural problems such as cribbing and weaving. It provides a calming effect in the horse trailer.

## Natural feeding posture

The HeuToy is suspended in an optimal feeding posture. Thanks to the low head position with stretched neck, the horse generates more saliva, which is urgently needed in the stomach to prevent acid build-up. Colic is prevented. Horse osteopaths and vets have judged the head movement during eating to be very positive..

**Safety** The risk of injury, mainly due to entangled hooves, is reduced dramatically. In addition, the horse can no longer walk into the hay net and damage its tendons, for example.

**No dust problems** The nostrils are always optimally covered when feeding thanks to the hole spacing. The dust inhalation is much lower – and this is ideal for horses with dust allergies. The HeuToy can also be simply filled with wet hay.

**Ease of rationing** The bottom row of holes as well as the slats on the bottom can be adjusted for easy or difficult hay extraction, depending on the character of the horse. Setting for long and short fibrous hay.

**Material** The HeuToy is produced from a bite-proof, stable, durable and non-splitter material, and it's manufactured especially for us in Germany. It is also suitable for food approval. It is not made from truck tarps, blue chemical barrels or similar products. Our HeuToy is elastic, because an animal must be able to squeeze it to get the hay. The elasticity also prevents the risk of injury. The HeuToy is weatherproof and can be used outdoors in both summer and winter.

**Cost savings** Low hay loss as the hay is supplied directly from the HeuToy. By earning the food, the horses eat every last straw. 😊 The hay is no longer wasted.

**Time savings** The HeuToy is easy and fast to fill just like a barrel and can be easily moved to each feeding position. It can be filled with various treats (carrots, hay mix, etc.).

## Recommendation

Our customers also include horse clinics and veterinarians. They appreciate the dust-free and metered feeding in an optimal feeding posture. Horse osteopaths are also enthusiastic about the optimal feeding posture and the resulting intensified the horses' neck mobility. Our HeuToys are often recommended and even 'prescribed'. Please also see the interview with Dr. Langsdorff at
